An ADDRESS to the PEOPLE,
On the Subject of MONOPOLY and EXTORTION.

DEAR BRETHREN,

FROM an ardent glow of generous patriotism, and a sincere attachment to the cause of freedom, I am induced to seek the prosperity of my country with the tenderest concern and deepest solicitude. The indulgent public will therefore pardon the presumption and vanity I may be guilty of in this undertaking, as it is nothing more than a well meant essay to do good; tho' with a melancholly apprehension that not a word of all that I shall say will be regarded. When tyranny and usurpation, by terrible strides across the *atlantic* reached our peaceful shores, and made the first attack upon our liberties, it is surprising with what boldness you asserted your rights as freemen; with what unanimity and zeal you opposed the first encroachments of lawless power; and with what religious exactness you adhered to the agreements and regulations that were then concerted as the best medium of resistance, in which you evidently sacrificed private interest to that of the public, and thereby exhibited a spirit of patriotism worthy of yourselves. How justly as well as severely did you also stigmatize those daring villains, who divested of every sentiment of honour and virtuous patriotism, violated those sacred engagements by sordidly preferring their private interests to the salvation of their country, the welfare of posterity, and the common good. But tho' the schemes that were then projected did not so fully answer our expectation as could have been wished, yet it served to discover the real sentiments of the people, who manifestly approved of these disinterested resolutions, a few individuals only excepted; and the universal cry was, "*death is preferable to slavery*." Almost the whole Continent with one heart and one voice, being engaged in the glorious cause; and private interest when set in competition with the public good, was ranged with black ingratitude and perfidy.—Thus you did go on with undaunted courage and invincible resolution, persevering in the best of causes, notwithstanding the snares and machinations of the adversary on every side.—But the scene at length has shifted:—Public virtue has declined, and given way to private interest. Monopoly and extortion, with a rapidity equal to that of *Noah's flood*, has overwhelmed the land to almost an equal height; and the cloud still gathers blacknets in our hemisphere, and darkens the prospect as far as eye can reach; and which unless dispelled, will burst, I fear, in still greater abundance, to the no small detriment of that great cause, on the issue of which, such grand events are to be expected. For tho' we continue happily united in one of the main points, I mean that of opposing the public enemy; and our arms have been of late crowned with happy success; yet this will not, I fear, altogether avail us, except a stop can be put to the present growth of monopoly and extortion, as these have a plain tendency to divide, to disunite, and create dissensions among ourselves; an event which our enemies have long desired and waited for, tho' happy for us, it has

not yet taken place. To see a band of people distressing and devouring one another, while a public enemy in the bowels of their country, are spreading devastation and ruin on every side, would be, to an indifferent spectator, equally surprising and ridiculous; tho' not more so than, in circumstances like ours: To see men who but a little while ago seemed ready to sacrifice their all to the shrine of liberty, and to out-vie each other in their exertions for the common good, now out-vie each other in their disregard of public virtue; and to emulate each other in the vile practice of extortion by extravagant demands for what they have to sell; or in refusing it to the necessitous at any price for the ready cash; and to see them pursue these destructive courses to such uncommon lengths, when the worst of mischiefs both to themselves and the community, are likely to be the consequence. If men would but for one moment resist on the dangerous tendency of these pernicious practices, there are none, I believe, who have the least sincere regard for the good of the common wealth, but what would readily unite in suppressing them. — But men are sunk so deep into self, and there is so little public virtue remaining, that we seem, in some measure, to have lost sight of the main point, and every faculty is exerted in the cause of private interest and self-aggrandizement. But I shall not attempt to describe all the intricacies and mischiefs which are consequent upon this business of monopoly and extortion. Let it suffice only to remark, that as it strikes at the vitals of the common wealth, by affecting the medium of trade, by distressing the poor, and discouraging the enlistment of soldiers; as well as by various other ways and means which are equally pernicious and destructive; it is certainly incompatible at once with private interest and public liberty; as these are so closely connected in the present unsettled state of things, that they must stand or fall together. Those of you who are possessed of independent fortunes, should the war prove successful, will be the greatest gainers. Should it prove unsuccessful, you will be the greatest losers. The fate of your fortunes depends on the success of your arms. It is the class that are principally affected by this dispute. The poor have little to loose; but you depend on these to defend your country and fight your battles. They have ventur'd their lives and shed their dearest blood for you. And yet it is the poor chiefly that feel the calamitous effects of monopoly and extortion; tho' it is evident these men were never more necessary than now, never more useful, and their services were never yet of greater importance. Surely such men are worthy of some notice. They claim some attention. They deserve the possible encouragement. And nothing can be so conducive to this, as putting a total period to the present extravagances, and parting with the necessaries of life for the current cash, at the stipulated price. We should then go hand in hand without murmuring and discontent. Our ears would not then be filled with the complaints and grievances of the oppressed poor. Our armies would be filled with soldiers who would be excited to act like men that had a valuable recompence for their services; and have something of consequence to stimulate their native valor. Our Generals would not then be so often reduced to

the necessity of calling in the militia to their assistance &c— And happy period, perhaps might soon take place to the present war. These and many other advantages are the natural offspring of reformation from the above mentioned abuses. A reformation which so truly public spirited man and friend to his country, will be wanting in his exertions to effect.

But I must draw to a close, after congratulating you upon the late happy success of your aims; a success which together with a removal of the above-named oppressive grievances, it is hoped will be attended by the most decisive good consequences; and as a means of speedily establishing these United States, in circumstances of peace, liberty and safety. That this glorious period may hasten on, is the hearty desire and sincere wish of, dear brethren your most respectful and most humble servant,

October 14, 1777

THE AUTHOR.

Of the ECLIPSES this Year, 1778.

THERE will be three Eclipses this year; Two of the Sun and one of the Moon, in the following order, viz.

- I. The first will be of the Sun on *Wednesday* the 24th day of *June*; the most remarkable Eclipse seen with us for many years, It will be visible and total, and by calculation follows, viz.

	b.	m.	s.	
Beginning	9	23	49	} Equal time for noon
Beginning of total darkness	10	38	27	
Middle, or greatest obscuration	10	40	47	
End, or emergence fr. tot. dark	10	38	14	
End & full recovery of light	12	8	41	
Duration of total darkness	0	4	53	
Whole duration of the eclipse	2	44	52	
Quantity eclipsed,—digits,	12	14	53	

The parallax of latitude at the time of the visible conjunction is an exact calculation I found to be 19 minutes 19 seconds south; and the Moon's true latitude north ascending 18 minutes 54 seconds, that the visible latitude is only 25 seconds south; the semidiameter of the Moon, in the circle of altitude, being near her perigee, it is 50 seconds, and that of the Sun 15 minutes 49 seconds. The black circle round the margin of the type, represents the excess of the Moon's diameter above the diameter of the Sun. This eclipse will be celebrated in about 3 degrees of the celestial Crab.

- II. The second is of the Moon on *Thursday* December the 1st day, visible, and by calculation as follows, viz.

	b.	m.	s.	
Beginning	11	23	39	} Equal time for Afternoon
Middle	12	24	49	
End	13	35	59	
Duration	2	22	20	
Quantity, eclipsed,—digits,	5	$\frac{1}{2}$	0	on the North side

It is celebrated in about 12 deg. of the celestial Twins.

- III. The third will be an Eclipse of the Sun, on *Friday* the 18th day of *December*, about five in the afternoon, invisible

I. JANUARY bath 31 Days. 1778.

On the Cross Events of Life.

WHY were there once transporting pleasures known,
 Or why, alas! are they forever flown!
 Thus the vain impotence or reasoning pride
 Arraigns the present, blind to all beside.
 Yet heav'n's alwise, indulgently severe,
 Which makes our truest happiness its care. These

Venus will be oriental, or morning star to the 24th day of March; thence occidental, or evening star to the end of the year.

II. FEBRUARY hath 28 Days. 177

These cross events of varying Life design'd
To prove the latent forces of the mind ;
Let human bliss an equal tenor boast,
And half our nature's excellence is lost.
Virtue by fortune lull'd in soft repose,
Is wak'd to action by alarming woes !

II. MARCH hath 31 Days. 1778

When in the beam of fate's unclouded day,
 he walks with pleasure, thro' the flow'ry way,
 he only shares a weak divided fame,
 Our erring senses think their form the same;
 Her sorrow's night her rays distinguish'd shine,
 and Heav'n and earth confess'd her charms divine. Still

IV. APRIL hath 30 Days.

1778

Still may her aid each absent good supply,
 Prompt the bright hope and check the rising sigh :
 Tho' now the dark inclement seasons low'r,
 Immortal virtue mocks their feeble pow'r :
 Secur'd by Heav'n her fair possession lies,
 Beyond the gloom of sublunary skies.

VI.

JUNE hath 30 Days.

1778.

Wheel in undisturbed Ways;
 Ends are set to our first Days.
 All *Mankind* are rul'd by *Fate*,
 No Man can propose a *State*
 Firm and stable; various *Chance*,
 Always rolling, doth advance
 That *something* which we fear.

Full Quart 1 Day, 10 Aftern.

Last Quart. 17 Day, 8 After.

Full Moon 9 Day 11 Aftern.

New Moon 24 Day, 11 Morn.

On DELAY.

DELAY gives Strength: the tender bladed Grain,
 Shot up to Stalk. can stand the Wind and Rain.
 The Tree, whose Branches now are grown too big
 For Hand to bend, was set a tender Twig:
 When planted, to the slightest Touch would yield,
 But now has got Possession of the Field.

Resist

VIII. AUGUST hath 31 Days.

1778.

Relie at first ; for Help in vain we pray,
When Ills have gain'd full Strength by long Delay,
Be speedy ; for who's not To-day inclin'd,
To-morrow we shall more unwilling find.

Who till To-morrow would his Work delay,
His lazy Morrow will be like To-day ;

78. X. SEPTEMBER hath 30 Days. 1778.

But is one Day of Ease too much to borrow?
 Yes sure; for Yesterday was once To-morrow;
 That Yesterday is gone, and nothing gain'd,
 And all thy fruitless Days will thus be drain'd;
 For thou hast more To-morrows still to ask,
 And wilt be ever to begin thy Task:
 Who, like the hindmost Chariot Wheels, are curst,
 Still to be near, but ne'er to reach the first.—

XI. NOVEMBER hath 30 Days. 1778.

To Passion ill-return'd short Rounds are set,
 The Lover that's forgotten will forget.
 Ye Nymphs, be confident that Lover lies,
 Whose Tongue declares his Love before his Eyes.

A Maid, unask'd, may own a well-plac'd Flame,
 Not loving first, but loving ill's the Shame.

Ye

XII. DECEMBER hath 31 Days.

1778

Ye Fair, whose Prudence, cautious of Deceit,
In Praise too warmly given, suspects a Cheat,
Without Disguise a Lover's Flattery hear,
Love, when it flatters most, is most sincere.

Sweet are those Pains which Lovers long endure;
He is half cur'd who wilhes for a Cure.

778 THOSE who are made of fearful dispositions, of all others seem the least beholden to nature. I know not any thing wherein they can be more unfortunate: They enjoy nothing without a frightened mind; their sleeps are even troublesome to them: They tremble at the present, and miseries that but may come, they anticipate and send for painting them in more dreadful colours than any enemy can devise: Nay, it were well if they had but fear more miseries than the bolder people; but it plainly appears the Coward really meets more dangers than the valiant man; for every base nature will be ready to offer injuries, where they think they will not be repaid: He will many times beat a coward, whom he would not dare to strike if he thought himself valiant: Evils which must be, they meet with before their time; and evils which are but probable, they ascertain. They who by even poise, might set safe in a boat on a rough sea by rising to avoid drowning, are drowned. We know some out of fear of death, have died. In a battle we oftentimes see the valiant man escape, by a constant keeping his rank, when a coward, meeting dangers, runs by avoiding one, into the several walks of many. Certainly (says *Feltham*) I have studied in vain, in thinking what a coward may be good for: If ever he did any thing well, Fortune was his guide; not Wisdom. His fear begets in him delay, and delay breeds that which he fears, viz. *Danger*. The Soldier that dares not fight, affords the enemy too much advantage for his preparation, both for directing his men, plotting his stratagems, strengthening his files, ordering his camp, and doing any thing that may turn to the disadvantage of his foes. On the other hand, all the noble deeds that have beat their marches through succeeding ages, have proceeded from men of courage. And I believe many times their confidence kept them safe. A bold look will sometimes daunt a base attempter. The brave soul knows no trembling. *Cæsar* spake like *Cæsar* when he bade the mariners fear nothing. Indeed valour casts a kind of honour upon God, in that we shew that we believe his goodness, while we trust ourselves in danger upon his care only. The glorious warrior gives most discomfiture in his suddenest onset. Indeed temperance, as the casualties of the world are, is a virtue singular worth; but without doubt high spirits directed right, will bear away the day for more glorious actions. These are best to raise commonwealths; the others best to govern them. Both are of excellent use. An arrow aimed right, is not the worse for being drawn home. That action is best done, which, being good, is done with vigour of spirits. What makes zeal so commendable, is the fervency it carries with it.

A Judgment of Don Pedro, King of Portugal, in a case of Murder.

A Portuguese Shoemaker prosecuted a Roman Catholic Bishop who had got his father assassinated, and the fact being proved, the Bishop was prohibited from saying Mass for one year; the Shoemaker not satisfied, applied to Don Pedro, King of Portugal, who, after enquiring into the case, sent for the Shoemaker, and asked him if he would venture to kill the Bishop, which he undertook to do with the King's permission, and performed the day following, at a procession, just under a window where his Majesty was placed: He was immediately seized and brought before the King. Don Pedro asked what could prompt him to murder a Bishop; he pleaded the provocation he had received, and his Majesty's permission: To which the King replied, Since the Bishop was prohibited from saying Mass for one year, I condemn you not to work at your trade for the same term; but that you should not starve, a pension must be paid you out of the Bishop's estate.

JUSTICE indeed!—O great and glorious name!

Through every time and station thou'rt the same;

Nor pains nor death, should break thy sacred laws,
But better perish in the righteous cause.—

Act as you will, to State and Laws, if true,

Right will prevail at last;—if false, adieu!

A T H O U G H T.

HOW like the fleeting Wind away,

Whole Years of Joy depart;

But Oh! how slowly does one Day,

Move to the mournful Heart!

Epitaph on a MISER.

READER, beware of immoderate love of Pelf,

Here lies the worst of Thieves, who robb'd himself.

FRIENDS Yearly Meetings in NEW-ENGLAND.

At *Sandwich*, the 6th day before the last first-day in the year.

At *Greenwich*, the last first-day of the 5th month. [month]

At *Rhode-Island*, the 2d sixth day of the 6th month.

At *Nantucket*, the 4th sixth day of the 6th month.

At *Kingston*, the 2d first-day of the 8th month.

At *Providence*, the 4th first-day of the 8th month.

At *Salem*, the 4th first day of the 9th month.

At *Scituate*, the 1st sixth-day of the 10th month.

At *Dartmouth*, the 4th sixth-day of the 10th month.

At *Swansey*, the 2d seventh-day of the 11th month.

the following is the Method of making Molasses and sugar, from what is commonly called Sugar-Cane, (as practised by the Planters in the West-Indies) and which may be done in the same way from the Stalks of our common Indian Corn (if cut before they are too dry) or from any other Sweet Juice, such as Maple, &c. as was performed last Year, by many Persons in this State, with great Success.—

THE Planters, at the proper season, cut off the Reeds at one of the joints near the roots; they are then cleared of the leaves, and tied up in bundles, and sent to the Mills, which are worked either by water or horses. The sugar-mill is composed of three rollers of an equal size, placed perpendicular, and all lined with iron plates, where the canes are to pass between them, only the middle roller is much higher than the rest, to give the larger sweep to the poles to which the horses are yoked.*

The great roller in the middle is furnished with a cog of teeth, which catch the notches in the two side rollers, and force them about to bruise the canes, which pass quite round the great roller, and come out dry and squeezed of all their juice, which runs into a vessel under the mill, and thence conveyed into the first boiler. After the juice is let out of the first vessel, it is received into another, in which it is boiled more briskly, and skimmed from time to time with a large flat of spoon, pierced with holes to let the liquor through, while it retains the scum and foulness separated from it in boiling; towards the end of this boiling, they throw into it some strong of wood-ashes with some quick lime mixed among it; this greatly promotes the separation of the foulness that yet remains among it; and, after it has boiled some time with this addition, they drain it off. The dregs left in the cloths make a kind of wine, when fermented properly with water. The strained liquor, which is now tolerably clean, is let into a third boiler, in which it is boiled down to the consistence of Sugar over a brisk fire. The people who attend it continually stirring and skimming it. Great caution is to be used that the boiling matter does not run over the sides of the vessel, which would be of very dangerous consequence; they prevent this by taking up quantities of the boiling matter with a ladle, lifting it up high, and letting it run again, and by now and then adding a small piece of butter, or fat.

* These who do not incline to be at the Expence of erecting a Press on purpose for this Use, the common Cyder Press will answer, but not to so great advantage.

fat of some kind, which takes down the bubbling almost instantaneously. They are very careful that no acid of any kind comes near the vessels, a very small admixture of that being sufficient to keep the matter from granulating. When the liquor is boiled enough, which is known by its concreting, on throwing a spoonful of it up into the air; it is then let out into a fourth vessel, under which there is a very gentle fire, only kept up that it may have leisure to granulate; when it has begun to granulate, it is let out of this last boiler into a kind of conic earthen vessels, open at both ends; the widest aperture is placed upwards, and the smallest end downwards, its aperture being stopped with a wooden plug. It is left in these vessels twenty four hours to concrete; after this they are removed into sugar-houses, with a vessel of earthen ware under each; the plug is then taken out of the bottom aperture of each, and they are left in this condition for about forty days, that all the thick liquor, or Molasses, may run from them; after they have stood thus long to drain of themselves, a quantity of clay is diluted with water into a thin paste and this is poured on the top of every parcel of sugar in the vessels, so as to cover it two or three inches deep. This water, by degrees, all-leaves the clay, and penetrating into the mass of Sugar, runs through it, and carries off yet more of this foul thick liquid with it, into the vessels placed underneath to receive it. When the clay is quite dry, it is taken off, and the first preparation of the Sugar is then finished; they then shake it out of the vessels, and can it into lumps, which are of a dirty, brownish, or greyish colour; it is then put up into hogheads or other casks, under the name of grey or brown Sugar. The sugar in this state, ought to be dry, not unctuous, and to have no taste of burning. The liquor which has run from the sugar in standing, is boiled, and sold under the name of Molasses, which affords, by distilling, a very clean and good spirit, vulgarly called RUM. —

Many other Plants and Trees might be found which would yield Sugar; thus several species of Maple, &c. afford a juice which boils into good Sugar; but the great quantity of it yielded by the Sugar cane, and its easy culture, renders it unnecessary for the West Indians to look farther after what it so abundantly supplies them with; tho' in the northern Climes we are unavoidably necessitated to substitute other Things in its stead—such as Corn Stalks, sweet Apples, &c. in order to produce there from the above useful articles of life, viz. Sugar and Molasses—which are in themselves not only innocent, but reconcile to the palate and stomach substances otherwise disgusting to both.

ROADS to the principal Towns on the Continent, &c. from BOSTON :

With the Names of those who keep Houses of Entertainment.
